

PRESSED TIN PANELS CORNICE INSTALLATION INSTRUCTIONS

1/Shows the Cornice Mounting Strip which is To be installed first. This can be install with a Small nail, tack or screw. Lip is to face out.

2/ Shows the cornice slipping into the Mounting strip straight over an existing Gyprock Cornice. There is no need to remove old Cornices unless The old is larger than the new.

3/Shows the Cornice in place, which you can Then affix along the top edge into your ceiling with nails, tacks etc

4/ This picture shows the sheeting then going over the top edge and butting up ready for fixing in place. Sheeting must be started from the centre of the room, not the edge.

NOTE: In some cases that a batten will be needed to be fitted. Place batten width from the wall, to the back of the cornice. This is to push cornice against to prevent

INSTRUCTIONS FOR MITRING CORNICES

Tools required are: Mitre box, small angle grinder, 1mm aluminium grinding disc, clamp and bees wax or candle for lubricating disc.

1/ Shows sliding the cornice into the mitre box for internal angle.

2/ Shows scribing in nominated position. Scriber to be held flat to end plate.

3/ Move along in Mitre Box approx. 100mm. Clamp to hold in place prior to cutting, cut 5mm to the outer side of scribed line.

4/ Move back in mitre box until the scribed line is in line with the mitre box end plate. Now clamp and hold, remove the 5mm with cut off disc running on mitre box end plate.

5/ De-burring of any sharp edges left on the cornice with a metal file.

6/Picture shows left hand cornice still left "square" installing. Right hand cornice has been mitred.

7/Picture shows both cornices coming together, just as they will be when installed.

8/Shows example of finished Mitred cornice.

9/Shows putting cornice in the mounting strips overlapping each cornice.
